Toward the front of the body.
Posterior
Toward the back of the body
Medial
Toward the midline of the body
Lateral
Away from the midline
Proximal
Closer to the point of attachment or origin of a limb
Distal
Farther from the point of attachment or origin.
Superficial
Closer to the surface of the body
Deep
Farther from the surface of the body

1.6 Body Planes

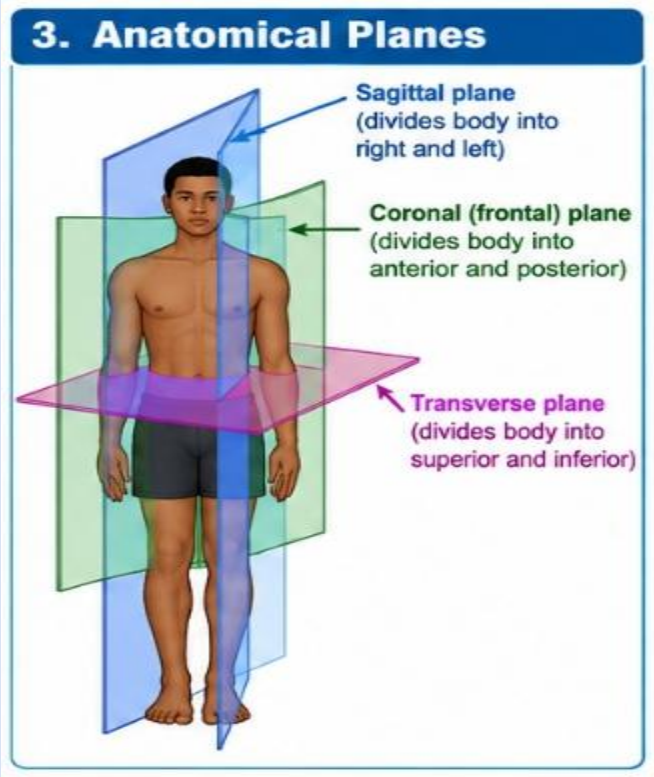

Body planes are imaginary flat surfaces used to divide the body for anatomical description.

Sagittal=Divides the body into left and right

- Midsagittal/Median plane=equal left and right halves
- Parasagittal plane= unequal left and right portions

Frontal/coronal plane=Divides the body into anterior and posterior portions
Transverse plane= Divides the body into superior and inferior portions.

1.7 Body cavities

Body cavities are spaces within the body that contain and protect internal organs.

These include:

A. Dorsal Body Cavity

Contains the:

- ✓ Cranial cavity= contains the brain.
- ✓ Vertebral/spinal cavity= contains the spinal code

B. Ventral Body Cavity

Contains the major organs of the chest and abdomen.

-it includes:

- ✓ Thoracic cavity= contains the heart and lungs.
- ✓ Abdominopelvic cavity= contains many digestive, urinary and reproductive organs

The abdominal pelvic is divided into:

-Abdominal cavity

-pelvic cavity

1.8 Anatomical regions

The body can also be described using specific regions

Examples include:

- Cranial- head
- Cervical- neck
- Thoracic- chest
- Abdominal- abdomen
- Pelvic-pelvis

- Brachial- arm
- Antebrachial- forearm
- Carpel- wrist
- Femoral-thigh
- Crural- leg
- Tarsal- ankle

📖 Chapter 1 Quick Review

1. What is anatomy?
2. What is physiology?
3. Differentiate between gross anatomy from microscopic anatomy.
4. What is anatomical position?
5. Define superior and inferior.
6. Differentiate medial and lateral.
7. What is sagittal plane?
8. What does the thoracic cavity contain?
9. Differentiate regional anatomy from systemic anatomy.
10. Name the major body cavities.

CHAPTER TWO: CELLS AND BASIC TISSUES

2.1 ***The cell***

The cell is the basic structural and functional unit of the human body.

The human body contains different types of cells, and each type is specialized to perform particular functions.

Examples:

- Nerve cells- transmit electrical signals
- Muscle cells- produce movement
- Red blood cells- transport oxygen
- Epithelial cells- protect body surfaces

Basic parts of a cell

Most human cells have three major components:

1. Cell membrane
2. Cytoplasm
3. Nucleus
